I am a 34-year-old Brazilian residing in Curitiba, PR, currently in a career transition seeking opportunities in the IT field. I am pursuing a degree in **Systems Analysis and Development** at Estácio and hold a degree in **Mechanical Engineering** from UTFPR. My ability to learn has allowed me to work in diverse sectors, ranging from automotive engineering, translation, service on a cruise ship, to my most recent endeavor, where I independently learned the art of artisanal breadmaking and successfully operated a bakery for 6.5 years without ever incurring losses. However, my passion for programming led me to close the bakery and dedicate myself to studies, starting with The Odin Project's Full Stack JavaScript track. I am now seeking a company where I can contribute effectively and continue my professional development.

Languages: Portuguese (native), English (fluent), Spanish (intermediate), German (basic).

Web Development (**MERN** stack) - since nov/2022
I have developed projects using the following languages, tools and frameworks:
- Languages: **JavaScript**, TypeScript, CSS, HTML;
- Front End: React, TailwindCSS, Webpack, API fetching;
- Back End: Node, Express, MongoDB database (Mongoose)

I have also used Git for version control, Jest for automated tests and TDD and I am familiar with the basics of SQL and agile methodologies (Scrum)

Panis Padaria Artesanal - nov/2016 until jun/2023
- Co-owner of a small artisan bakery in Curitiba, Brazil;
- In charge of the whole production operation, including product and process development, improvement, as well as inventory and equipment management;
- Administrative tasks, including planning, marketing, advertising, and customer service.

Renault do Brasil (outsourced)
Engineering Analyst - dec/2012 until may/2013
- Worked in the Product Engineering department as part of the team responsible for seats and safety equipment;
- Served as the technical lead for the seats of the Renault Master van and the limited series Sandero Tech Run during their project phase;
- Defined and monitored action plans with suppliers to ensure product compliance with validation tests and project requirements.

Renault do Brasil
Product Engineering Intern - dec/2010 until dez/2012
- Analyzing parts and data from warranty returns and customer surveys;
- Interfacing with suppliers to request both temporary and permanent solutions for the identified problems;
- Supporting the strategic group of the team by presenting solutions using Microsoft Excel.

Case New Holland - jul/2008 until dec/2009
- Internship at the Manufacturing Engineering department;
- Documentation of manufacturing processes on the tractor assembly line, specifying parts, tooling and assembly methods.

I have also worked as a waiter at a cruise ship, as a freelance translator, musician and teacher. I have two lovely cats, I love exercising and I have a big passion for music and music-theory.
